

LECTURE 6 – BIOENERGETIC CONCEPTS IN PATHOLOGY

A Review of Basic Bioenergetic Research 1983 to 2006

BY PETER FRASER

Prologue.

Academic medicine and quantum physics are both disciplines in disarray, and no one seems to be able to captivate the attention of either of these disciplines to the point where some corrections can be made. We are confronted too with a unitary medical hierarchy of immense monetary power and supported by immense lobbying power. I don't think anyone will gainsay this. But no matter how much money you have and how insistent your lobbyists are, these are for nothing if your model of how biology and medicine works is simply way wide of the mark.

So in the beginning, we cannot say absolutely that the medical model has failed, because there is no coherent, clearly articulated medical model at all in existence. But the side effects of medicine have, in many cases, reached its limits of acceptability for the public.

I am writing this in the hope that a new model of medicine will arise from the ashes of the old, and that a new model of quantum physics will be accepted gradually by the old and rapidly by the young, to create what must be the biggest scientific revolution ever seen in the life sciences. In the case of quantum physics the problem is not so large, because there have been so many prominent scientists in the twentieth century whose work has been very close to what we now think is correct. But we could say the same of medicine and biology, if only we could reinstate the status of those who have been correct all along and whose work has been ignored for many years. We are just starting to uncover a lot of useful material in this area.

This present writing covers 23 years of quest and a lot of new ideas are entertained, with the hindsight that there is no such thing as a new idea. However the presentation of these ideas and the arrangement of them and the language of them is, we hope, new. These new ideas are observations made on the basis of matching sets of data, and thousands of ideas have been discarded on the way to this present point because of failures of the matching process. This matching testing has been useful in building a coherent theory which is cognisant of the best medical research where it is compatible with the energetic theories that have emerged over the last 23 years.

- The Human Body Field Concept develops from the existing ideas of Meridians

As a student of Traditional Chinese Medicine for years, and as a head of an acupuncture college for thirteen years, I was only too well aware of the immense deficiencies of the meridian theory of the ancient Chinese culture when it was placed beside modern medicine, which is based clearly on what is really there.

Meridians cannot be found, or measured, or conceptualized, so we must say that they are not real. Efforts by many researchers to find them merely resulted in an interest in following the electrical measurements of the body, particularly on the skin. The meridians however are not purely on the skin and have many deeper channels going right inside the body to the organs. So why look for them on the skin? Simply because this was so easy!

I took another path, and decided to get the “meridians” into ampoules and measure them and their relationships as entities, and these meridians were certainly not electrical by nature. Many years after 1983, when I resigned as a college head when the college went into a University in Victoria, Australia, I was beginning to try to get an “ideal” meridian into a bottle by learning to imprint messages from the acupuncture point, which was alleged to join to a meridian, into a bottle of 50% alcohol and 50% water. Once that “message” was in a bottle, we had something we could test and evaluate to see what was real about the meridians I had been teaching about for so many years in the absence of any real data on them, other than Chinese philosophical ruminations.

I got the idea to do this from Dr. Helmut Schimmel, who had with others started the Vegatest device in Germany long ago. He, being a homeopath as well as a medical doctor, as well as a dentist, had simply taken an animal, vegetable, and then a mineral equivalent of the 12 major meridians, on the basis of their similarity of symptoms from homeopathic provings, listed of course in a book these last hundred years, added them together, and got a homeopathic equivalent of the meridian itself!

This process meant that I had to learn about how it would be possible to imprint a message homeopathically direct from the body into a bottle. I did this, and I arrived, after many years, at a set of meridians with homeopathic medicines only. After a while it occurred to me that we could simply make a meridian out of pure energy, rather than from analogues of the body’s energy from Nature. I realize now this was a fateful step! This was in the late 1980’s.

At the time I thought that “pure energy” was sets of numbers that appeared when I learned how to read them from the “homeopathic imprints” I thought I had made directly from the body acupuncture points. Nobody then knew what a homeopathic imprint was, although there were machines supposed to be able to do it that had been around for many years. Explanations here are quite inadequate so far as the science goes, so I knew then that a new science might be called for.

There were electronic homeopathic copiers available, and one of these I obtained, and started to copy the Meridians directly from the body, and after many years had copies of the meridians in bottles that were equivalents, I thought, to the twelve meridians of the organs, the extra meridians and the Luo or connecting meridians. I copied the divergent meridians and the muscle meridians and so on until I had 92 of them!

By the early 1990’s I had found that these 92 Meridians, even if they were energetic in character, had to travel around the body *inside* the body, and it was found that many

types of connective tissues as well as cardiac tissues are able to convey messages whereas muscle tissues and other organ tissues did not convey their messages. Only the Divergent meridians appeared to link with cardiac tissues. At that time I had no idea about a whole body field; I knew only of the traditional Chinese meridian system.

And, as luck would have it, I had spent more than twenty years (just enough time, the Chinese would say) studying the I Ching, the oldest book in the world. And in this book we find mathematics in three dimensions, expressed visually, so that it shows sequence in a mathematical form. Because this is old knowledge, dating from distant antiquity, many modernist Europeans get shifty, but it's knowledge of the highest order possible—pure mathematics! Do not imagine that the ancients were any less intelligent than we are! Using the I Ching codes for progress from one thing to another, I was able to arrange the 92 meridians in a logical order so far as energetic order goes, not realizing at the time that sequence was one of the key characteristics of quantum physics! That was to come years later.

Once this was done, I arranged the meridian system in its apparently correct order (yes, for I Ching aficionados, there are two possible arrangements) and I found that the map of the meridians arranged like that were just like a spider's web and that energy would jump from one ring of meridians to another via a certain predictable pathway! Now even I knew in those days that quantum physics was about "energy levels", or so I then thought, and these rings of meridians could be some kind of body mimicry of a principle of science. Remember, that at this time in the early 1990's I knew very little about quantum physics. I made a diagram of these pathways, which I called the "spider diagram" because it looked like a giant spider's web.

I took the spider diagram to a theoretic biologist and oncologist of international note, who resided a few hours' distance from my home in Merimbula, at Moss Vale in the mountains west of Sydney. After a few sessions of what he called "sitting", we found that he was enchanted by the idea of an interlocking, orderly arrangement of energy in three dimensions in the body. So enchanted was he that he brought out his cheque book and started to fund my research. The scientist was Bevan Reid, scandalously original in thought but holding degrees in veterinary Science, medicine, as well as having done post-graduate study in oncology and post-graduate research at Oxford. He funded my research without interference for many years, and without his input nothing really would ever have happened. In those days, it was taboo to study energy like this, and there was a lot of fear generated. Ignorance and fear go well together. I know now how Galileo must have felt, and how much the "fear of discovery" can inhibit the brain function.

My brain function was greatly increased by Bevan Reid's cheque book, and soon we actually formed a research company to look into the ramifications of the spider diagram. I worked night and day, waking in the night to make more observations to push the research forward. I would wake in the morning with notes scribbled everywhere from the night before and hardly know what I had been thinking the night before. The new company was with another principle, none other than a famous oncologist Professor

Albert Singer, of London Royal Women's Hospital, where he practiced surgery for breast and cervical cancers.

During that time I realised that we could make purely energetic "markers" for cancer, so that we could simply match them with a person with cancer and make a quick and easy diagnosis. To do this we would have to find the common characteristics of primary and secondary cancers and simply read off the resulting sets of digits.

These were developed, because the company I was working with wanted to develop a cancer early-diagnostic device using modern computer technology. In fact, in the end, to test the validity of these "markers" of which there were only a few on those days, Professor Singer agreed to send some hundreds of preserved samples of cancer tissues from breasts, prostates, and other parts of the body to see whether we could say which ones had cancer of any type and which did not.

It was not easy (as you might imagine that it is) since when cancer is present, it distorts the whole body wave so much that the test procedure is affected in some cases. So to get a correct reading we had to make corrections as we went along. So good was our method of correction even then, however, that we scored over 92 per cent correct with no false positives, in a blind trial where only the doctors in London knew which samples were which, and we, of course, did the actual experiments in Melbourne, Australia! They were done by my colleague Chris Bourke, an associate in the acupuncture field and a former student at my acupuncture college.

I knew nothing about cancer then, except that I had years ago read Willem Reich's *The Cancer Biopathy*, which outlined the mental characteristics of people who get cancer. It was written in the first decades of the twentieth century and has not gone out of date. It is a classic writing. Medical people don't exactly write books about the causes of cancer these days as it's a taboo subject, one which I am breaking now.... White people's taboos are every bit as powerful as those of the Voodoo practitioners of West Africa. Once they are broken, they lose their power, and change can then occur.

I found in my own research in those days that people who scored positive for cancer according to the testing we had in place then, also had errors in the body field, and there were, I remember, about fifteen such errors. Then after a few more years, with increased research, I found there were twenty errors that could be noted, and so on it went. As we discovered more of the body field, more errors appeared. The errors in the body field seemed to occur in a pattern, and where we have patterns, we have something worth discovering, once we know what the pattern represents. By this time I had a set of hundreds of ampoules energetically representing the body field, so far as I knew it then.

At this time, Bevan Reid spent literally hours each day with me on the phone from Moss Vale outlining the current and past biological research. He had been an academic for 38 years then, and had read every day of his life straight after breakfast. He is a dedicated man. The major difficulties in biology appeared, day after day, and the efforts to explain them appeared equally as unsatisfactory. He spoke with me every morning for two hours

on the phone while our minds were fresh, and, over time, I could see the right direction to go in, and what questions had to be answered in the academic sense.

Once I had the idea of sequence, it was easy to add various things to the model of the body field, apparently in the correct place, so that a reading of the field would be more reliable. We were able to add things like hormones and enzymes, parts of the nervous system, as well as muscles, bones and other bits of anatomy other than just organs. I found a place for the blood and its organelles. But they had no greater organization than that at the time. But by the early 1990's the body field system I had developed was much greater than just a set of the 92 meridians from the years before.

At the time, however, I had no idea of the way in which the body field must be organized, even though I experimented at length to try to find axes and other geometric ways of organizing data in space. After a few years of talking with Dr Reid and Professor Singer, important information emerged, concerning cancer, that I would like to talk about now.

- Some Energetic Characteristics of Cancers

By the 1990's I had realized that cancer, whether malignant or not, was really a progressive (and possibly irreversible) breakdown of the body field function. The reasons for this were not then known. And just a little has been uncovered even now. Most of the body field as we know it now, was unknown then, too.

Science loves repeatability, but I could not see any absolute repetition of the same identical errors in the body field, although some of them did occur very regularly but not in the same configuration. There were certainly spots that went wrong a great deal of the time. I marked them in red at the time so I would notice them. Scientists studying cancer had already decided that something was accelerating the mutation rate of the human DNA to cause so many errors that cancer appeared. This was common knowledge after 1974. Naturally I had never heard of this research. The outback of Australia is not the best place to do research, although good for studying the beach, and waves even.

Reid was inclined to think differently from everyone else, so he very was careful not to pollute my mind with medical and genetics research about cancer. His own ideas I never really found out, except that he was a basic scientist going way back to first principles. Reid is represented in Australia's only medical theory journal published in Adelaide. No-one ever does basic medical research, but he indeed did. He kept steering me away from ideas about damaged DNA manufacturing incorrect types of protein tissues, preferring instead to treat me to ideas about the conservation of energy, and the way in which heat is distributed in living things. I even got lectures about the five chambers of the heart of the frog! As it turns out, this is of some interest. I got long stories about a biologist in South America who studied repeated bird calls. Why? We shall see!

Reid was interested in how homeopathy worked and very much like the idea of information transfer as it is known in homeopathy. He had scandalised his medical

colleagues in Australia yet again by traveling around Australia giving talks to natural therapists, making it clear that laying on of hands was okay, and that energy medicine and in particular homeopathic and even radionic treatments are very useful. He kept saying that the genesis of science was in superstition, which is basically quite right. There is surely a lot about radionics and homeopathy that is pure nonsense and indeed superstition, but we don't stop studying lightning and thunder because some natives in the jungle think it's sent by evil spirits! So I went on studying my sort of thunder and lightning!

Reid was in fact captivated by the idea of something going wrong with a basic part of the particle physics of the body, especially of the electron. The genetics people had had, by then, studied cancer for over sixty years, and had failed totally to come up with an even slightly convincing theory about cancer. By convincing, I mean one that matched the basic things we know about cancer. These I shall mention soon.

I was as scandalized by the Reid ideas as you are, I am sure. Never a day passes without our ideas about cancer being reinforced by the medical lobby in the newspapers. It amounts to mass propaganda that has little basis. All propaganda has to have an element of truth...but in the case of cancer there is a great element of fear present which, as Goebbels found out, is useful when doing propaganda.

So I found out some of the energetic characteristics of cancer. In its early stages, this almost completely non-diagnosable disease begins with notable mental characteristics of withdrawal, wanting to be alone, and above all resistance to help. This we can find out about from those who have studied it, like W. Reich. Some modern doctors don't think mental characteristics are important for anything, and try to treat them as chemical abnormalities. Emotions you know are chemicals. Reich found emotions cause great upheavals in the psyche, and can express themselves as vibration, heat and noise. His books on psychotherapy were, in the 1960's burnt by the U.S. medical authorities, and when he died, his papers were seized by the CIA and were never returned to his family. I had some six months contact with Reich's daughter, Eva. Much of my knowledge about bioenergetics was therefore obtained first hand from a good and historic source. Cancer is a biopathy where the emotional flow in the whole body is simply dammed up.

In the sequence of cancer development, after the emotional blockage occurs, the splanchnic nerves are affected. The spinal nerves going to the organ get inflamed and cease to work correctly long before the cancer develops. Does this mean that the DNA representing the nervous tissues of this particular type are more likely to develop errors than others? Well, I don't think so!

Another characteristic of the development of cancer is the appearance of viruses. There are certain types that are found more than others, but the hard fact is that they don't appear right in the place where the cancer actually appears in some cases. But there has been a great deal of work done over forty years showing links between the appearances of bacteria and viruses in the body and the appearance of cancers.

Human Papilloma Virus (HPV) is one of these families of viruses that appears in breast cancer, as well as prostate and cervical cancer. Of over 74 types of this virus already found, only handful are present when there is malignant cancer. So some types are “worse” others. Efforts have been made in the last few years to inoculate people against these half dozen strains of HPV.

I found myself in a controversial area of medicine where its pet theories failed year after year, and where the political landmines were quite terrifying. I had gone to social events with Professor Singer where appallingly rude cancer experts of the most medical variety would turn on their heels and walk away from me after even the most polite introductions by the Professor himself. Why are they so afraid? We shall see why.

Singer took me aside while we walked along the beach at Merimbula (one of the world’s great beach walks), and pointed out that if we were successful in getting a new diagnostic machine for breast or any other cancer, we would be up against a gigantic industry already invested in other methods. I thought quietly to myself that surely the situation would be changed by karma: that in fact the families of the medicine barons got cancer as often as any other social group. I still believe this.

Nonplussed socially, I went on studying what little there was to study outside of things related to genetics about cancer. Slowly it emerged that a key energetic characteristic of cancer was that it has a temperature of up to one degree centigrade higher than surrounding tissues of the normal type. Did the cancer, I wondered, have a higher metabolic rate than other tissues? If so, did the genetics errors cause this?

Reid did not think genetics errors caused anything. Unless, of course, we had a specific genetic error that caused a specific cancer! That did not happen at all in genetics. So he looked at the way in which the body regulates its temperature, and it turned out, I found, that it is simply not understood how humans, together with all other warm-blooded creatures, breaks one of the fondest ideas in physics concerning the behaviour of heat: the Second Law of Thermodynamics. Heat, the physicists say, dissipates itself, whereas in life, it concentrates itself. Entropy does not go with biology.

Forget metabolic rate! What if the cancer is disobeying some rule about arrangement of subatomic particles that means more heat is created? Exactly how it is that living things create heat is open to great conjecture once the text books are done away with? If Tibetan monks can make heat by breathing and humming, then the text books should include this fact, and leave out the part about the chemical that causes heat production in the cell.

Reid pointed out that the immune system should be able to engulf any reasonably sized cancer within three to five days, and simply remove it. Did you know that? Any reasonable person would say, “Well, why don’t you get the immune system to work again?” Since early in the twentieth century we have known about immuno-suppression, supposed at that time, around 1905, to be “caused” by the presence of certain viruses, and sure enough, in the case of cancer there is almost always a virus present that is chronic,

and can only remain in the body because there is immuno-suppression. But what about immuno-suppression that is not general, and applies only to a certain part of the body? The place where the cancer actually *is*? Curious, yet true in the case of cancer.

What, I thought, if there was a body field that could switch the immune system to the “on” or “off” positions merely by there being an error that could do this in the case of cancer. I always got annoyed by silly natural therapists who thought you could “boost” immunity. You can’t. It is “on” or “off”. And here we were in one of the countries with the best food in the world—middle-class whites in Australia—worrying about nutrition. I discounted the idea of a nutritional cause of cancer, and accepted it as a cause of things like rickets and scurvy. Reid was inclined, I think, to agree.

Reid pointed out something that the genetics people don’t really tell you. Cancers as a rule develop in organs, we thought. No, not quite—they develop on the *outside* of an organ. From there it spreads before going inwards. Or even to another organ. In the case of bones, it begins outside only to move inside. Not always. Nothing is always.

Reid was thinking in terms of body structures not in terms of genetic codes. Body organs and indeed bones all represent *cavities* in the body. It was the strange behaviour of cavities that first made it necessary to develop Planck’s Constant so long ago. So if ever we have reason to think that cancer might have something to do with particle physics then this is it : heat radiation and cavities. The Black Box experiment.

But another characteristic of cancer is energetically interesting and no one will tell you because it’s so political. Cancers really go wild when you fiddle with them, irritate them, poke them with instruments, cut them, operate on them. Why? You are disturbing the energy field around them, and when you do, they grow even faster. What are the consequences when the energy field is there to control growth, and you destroy it? You might think then that operating on growths is not such a great idea. Perhaps it is a better idea to try to get the body field to work again as a controller of growth. . . .

The silliness of natural therapists knows no bounds, not only according to the more medically informed. There is a history behind this silliness. Allopathic medicine was born on the dead bodies of homeopaths whose main idea about the genesis of pathology was intoxication by certain chemicals, the identical ones that the drug barons and backers of the allopathic colleges in the 1920’s, and forever afterwards, wanted to produce. So naturally, and for genuine historical reasons, natural therapists have a thing about toxins. The chemical industry has never been frank about the effects on humans of the chemicals they produce. That is their right. But remember that homeopaths used to be the world’s best toxicologists, and that their volumes of data about energetic toxicology are still in existence—in the vaults under the public libraries. They have been taken from the shelves and stored in the vaults! The data the homeopaths collected was not data from the LD50 experiments on luckless rats, but were all done on living human beings. Their data is of little or no use now there are 100,000 toxic chemicals in our immediate environment. Remember, too, that no allopathic doctor can even begin to acknowledge toxins are a cause of disease until you mention genetic damage caused by

chemical exposure. Did this get into the medical course? No, the medical text books may have been written and financed by a major chemical company.

Reid had little interest in toxins. He never used one example of a toxin and its relationship to cancer except in one interesting case. That of epithelioma—a lung cavity disease caused by long-term exposure to asbestos of certain types. The point is that asbestos is almost completely inert chemically, and that it causes cancer over 20 years or more simply by being there in the lungs for that time.

So, instead of looking at things as though there are “toxins” in the late nineteenth century sense as we all used to doing, now we look at toxins and have to ask, Do these things block off the body field?” Reid himself put me up to a major experiment, a pivotal one you might call it, which is worth describing again. Reid, from his previous 38 years of reading academic papers (things that I found pretty incomprehensible) managed to find that lead, tin, ytterbium and tantalum all were able to block what he called “a field.”

This field was surely not an electromagnetic one, the only one people really seem to think there is. But if de Broglie is right, then all electrons create a field because they all have a frequency and they move. Or as we now know, they appear to move. When they do so, a field is created. This is the field that Reid said would be blocked by the elements I have mentioned as well as by all of their compounds.

So, to reiterate, electrons make a field, and it’s not an electromagnetic one. We were now looking for field blockers simply because we needed to explain how an energy field can block the operation of one of the millions of immune cells in the blood, so that cancer, an alien tissue, can grow in the body.

Reid and I set up an experiment to make the field occur, in this case between two metal blocks, and then an electrical measurement was taken to indicate that the field was present. Then the field was broken, simply by placing a piece of tin plate in the field. It collapsed immediately. But I did not have any lead plate, nor any fisherman’s tackle nearby, so I used a *homeopathic replica of lead*, made electronically with an imprinting machine. Let me make that clear: I used an energetic copy of lead and the field collapsed. Reid nearly collapsed too. It meant that a memory of lead, tin, ytterbium or tantalum in your body could also cause a field blockage. A real piece of lead—yes, we know this will cause disease. But the *memory* of a lead or a lead salt? This is a long shot—to show that we understand what memory really is. It is a homeopathic or energy copy of the real thing. The memory angle can relate to the emotional causes of cancer, of which more later on.

Another bioenergetic characteristic of all biology, which is worth mentioning, is that of capacitance. This is an electrical term about how space itself can store energy. So if cancer is too much energy, as a lot of people seem to think, that cannot discharge, which is what William Reich thought, then capacitance is of great importance in understanding this. Yes, cells themselves do have a measurable capacitance, and there is plenty of research about this already done.

So, of course, I began to wonder what it was about the lead that went into the copier—what information was being stored when we made the copy? Did it take a lot of repetitions to store the information? What was the information and what was it being stored in? As you can see, not much was then known about the science terrain of our study.

Simplistic ideas about cancer can be ruled out simply because there are 135 types according to Reid and more than 200 according to more modern assessments. I was looking for common characteristics, of the energetic kind, and these were hard to find indeed. All the evidence from everywhere points to an annoying multifactorial cause of cancer that is very unsatisfying for the purist. We shall see...

- Some discoveries related to the development of the cancer markers.

Early in the 1990s I had developed energetic markers for primary cancer, as well as for various degrees of development of a non-malignant cancer towards transformation: its take off point where it becomes malignant and starts to move around to other organs.

Of course I wanted to test to see if we could match these cancer markers to other fields, which might shed some daylight on what was linked to cancer in any way at all. I had at my disposal some hundreds of natural therapists' stock in trade. I had also several hundreds of ampoules of homeopathic medicines gleaned from all around the world.

You still think cancer is chemical in its origin? If you do, it will surely mean that actual energy replicas of the cancer (of which I had scores in a test kit produced in Germany) would work on their own, to give us information that was worthwhile. They did not. The cancers only give useful matching information when they were alive and living inside a human body. So I could *not* use the homeopathic replicas of cancer for research. When I did, on several occasions I became extremely physically ill and had to go outside to vomit on the lawn outside my house. This actually happened quite a few times, and I made up my mind that any curative thing that I ever developed should only have healthy information in it. Hence, this occurred in NES. Nothing in NES is "bad" energy.

So the upshot of all these realisations (some of which may have taken months to occur) was that I could legitimately use the cancer markers, which were not cancers, but something else, sets of numbers that were so far meaningless, as test material to find out what foods, vitamins and herbs were related to cancer.

I tested herbs, foods, vitamins, minerals, homeopathic material medica, elements, all to no avail. I was horrified! I tested them all again and again on different days, and found nothing was able to match the cancer marker for primary and secondary cancer. I had of course hundreds of agricultural chemicals stolen and begged from farmers' sheds around Australia, for the purpose of testing. On their own, they did not form a "match" in the

energetic sense. Of all the black days in research, this was one of the greatest. All the natural therapy theories had vanished in one day. But the matching technique does not give the “right” answer in the absolute sense, but the “best” answer, considering the test. This will not stand up in a court of law because it is what might be called circumstantial: it all depends on the surrounding information sets.

The allopaths had won the day, and the whole of the natural therapists’ range of things were absolutely useless with cancers of all types. And the dreaded agricultural toxins were not to be implicated either. Now, not only would the allopaths cut me dead at parties, the naturopaths would as well, if they ever found out! Already the acupuncture people I had spent 13 years with regarded me as a misfit who should be ignored. So if you think I complain about being ostracized by allopaths, please remember that everyone does it!

To be quite honest, I did have some samples of chemotherapy agents brought to me by clients no longer using them, and yes, these did match to the cancer markers as one would expect they would! Well, you may like to stop reading now if you don’t agree with me, but remember that I don’t even agree with myself! There had to be a chemical “link” between the cancer and the chemotherapy agent or it would not work! It does not mean it’s the correct treatment, necessarily.

- Problems with the cancer markers.

These markers were related to something but we did not know what! It was assumed that we were measuring something like frequency, and there are many, many other workers against cancer who made the same fatal error. I did this too. At the time it looked as though secondary cancer was a greater frequency error somewhere in the body field than primary cancer.

Whatever we were measuring, the numbers used for Cancer 2 were greater than for Cancer 1. Or so I thought. In fact the secondary cancer marker was to the right of the primary one, on *sequence*. That is now the most important thing I can say. It is now quite clear that what we were measuring was an aggregate of phase shift error plus frequency. As such the test was totally useless, that is to say unreliable, at finding for us the location of the cancer, and as well it was unable to distinguish between the left and right side of the body. So, of course, we got errors in our measurements. This is what we now might actually expect but at the time it was a great source of grief.

Curiously, the test often got the bowel cancers and the prostate cancers back to front, again and again. A difference in the two was about 24 centimeters or more. WHY? How could things actually get transposed in our test? So in the end we abandoned the cancer markers as a reliable test for location of a cancer, making the test a lot less useful for the physician. But how could we get errors of 24 centimetres in a test for location? Clearly there was a lot to learn yet.

- The science model failed us again, and research stops.

Little evidence and writing remain for large tracts of this time due to periodic floods that carried away notebooks, moving houses where things just disappeared, never to be found again. The research company I was with failed to get funding for more extravagant research programmes, and I left the company. I moved to the Blue Mountains, quite high up, and spent some quiet years walking my dog trying to understand how real and “non-real” could be linked. There were two worlds created by the science model, and sort of odd things outside time, where there was an unreal world that you could not see or measure where, of course, all the action appeared to be! Duality is very upsetting mentally. I simply could not find a way through it.

I could not solve the problem, of course, because I was thinking the wrong way, once more put off the track by the science model we were entertaining at the time. So we could never measure this virtual world that looked so interesting so far as information transfer in the body field was concerned. It was unreliable when we measured it and remained all a dream...nothing had really materialized after 17 years of daily work.

I turned, while in the Blue Mountains, to consideration of natural methods of farming, which used the same homeopathic and radionic ideas that alternative medical people used. I was quite disillusioned with medicine and the people in it. The natural agriculture people were booming and there were big meetings of up to and more than 500 farmers all at once learning how to switch over to non-chemically induced farming methods. These people were less inhibited than the corresponding medical people, who after 100 years of allopathic predations were getting thin in numbers and disillusioned—like me.

I had given a talk to 100 farmers in Eastern Victoria, to great acclaim, and I had met with a man who rushed up to me after I mentioned that I thought calcium was *the* key to a lot of cancer development. It turned out that he had an interstate, and even international multi-million dollar, business in natural agriculture that did just that—got the right type of calcium for the right type of soil. We immediately became friends, and we started to talk. I told him that calcium was a sort of semiconductor or directional switch, and as such was the key to a lot of biological processes. He did not have much science so it was heavy going. He travelled for 11 hours to see me in Merimbula. Even though I was then living in the Blue Mountains, it was a long way away indeed.

It turned out that calcium is not just calcium but behaved differently radionically depending on the impurities caused by the elements, generally called traces, in agriculture: boron, molybdenum, iodine, cobalt and so on. So the way in which calcium behaves energetically, and therefore chemically, depends on the presence of minor trace elements. Once there is chaos on the body-field there is cancer... or so I thought. I had found that one of the things that always goes wrong in the body field when there is cancer is the metabolism of calcium. I am not the first person to observe this. Calcium is all pervading in biochemistry and so in a failing system such as we have in cancer, it is to be expected that calcium will go wrong.

That is not the point of this writing at all, however. Meeting with the agriculture businessman, John Pannan, and his wife Marjery, I was struck by his use of the radionic device he had, since I never really used one. It was of interest. He gave me a complete demonstration of it and as I looked at the configuration of the dials I suddenly realized something that I never would have thought of otherwise—sequencing in *space*. He made me do my own method of testing on the floor of a nearby apartment, and I found that all the calcium combinations were off the dial as it were in the subsonic region of frequency—if it was frequency we were talking about, and every radionics person talks about vibrations and frequency. Whatever we were measuring, it was clearly divided into decedary units by the radionics people. And these decedary units of *something* were also arranged sequentially.

A few days later when I had returned to the Blue Mountains, a new era in testing the body field began. I set about dismantling the sequences of ampoules, of which there were many, and started to rearrange them another way, taking note of the way in which the dials were arranged in a radionics instrument, sequentially from the bottom right to top left. Forget about the numbers, the radionics “frequencies” and everything, I thought. Let’s just get the *position* in space correct!

Knowing that we previously had got jumbled results when the ampoules were arranged wrongly, I was willing to have one last effort to get the system I had for diagnosis to work properly and without so many errors. This time the ampoules in the test were not arranged as they had been, which was to satisfy the arrangement for the meridians, but were instead arranged to satisfy the arrangement in 12 decedary dials from a radionics idea from farmers! Desperation! Yes, I thought we would get more out of the farmers doing the same thing as the alternative therapists because the farmers were less afraid and more open about what they were doing, striking fear into the hearts of every agricultural consultant trained at the behest of the chemical companies in universities! The new arrangement was done by testing each ampoule against which of the 12 dials it would like to be categorized with, by a matching technique of course! Of course things changed a lot in the results I was getting in the testing.

But I now I needed to earn my living again, having no funding at all and of course now I was on the last of my money I had accumulated over my life...all spent on seemingly mad schemes to find out what was happening when people get sick. I was in a lot less secure place. . .

The new system I developed while I was in the Blue Mountains slightly resembles the NES system we have today, and it was taken from the agricultural radionics people’ machines! So much for medicine!

A dear friend of mine, Tenzin she shall be called like so many others, was a Buddhist nun living in the Blue Mountains who ran across me in Merimbula and I did some work on her for a few sessions. She had developed lung cancer, and was in quite a weakened state when I saw her again. In fact she was very woozy and actually skittled my letter box in its drive as she was leaving one day.

Naturally I offered to treat her for no money as Buddhist nuns don't really have a lot. This turned out to be a good arrangement, as we could go out for meals together and have as much fun as possible. She was under medical care, and not much hope of course was held out to her. By the time I got to her she had secondary cancer of the lungs. I still remember the excitement of being with such a lively and vibrant and loving lady. Her test showed that the early part of the test, for what we then called Compartments and (now call Integrators) 1, 2 and 3, were all faulty in some way, as were the tests for Compartments 10, 11, and 12.

So here was a person with apparently no emotional problems, well adjusted and sane, who meditated daily for some time, and who was gradually succumbing to lung cancer. What was going on? Had she sat too close to a smoker? No. Actually, she herself knew what the initial "shock" was—a motor accident some years before that now was a memory but that she could not erase. That memory was the problem, and she tried so hard to do something about it, to no avail, using Buddhist ,antras, and meditation. Shock and the memory of shock. Of course, in a few months she was dead and I missed her cheerful visits.

But I now had a new system of arrangement of the body field ampoules and great strides were made over the years, and of course it was found that the markers for Cancer 1 and 2 were to be placed in two compartments at once, making them of courses nice and complex and so therefore hard to deal with. They wanted to belong to both Compartments 10 (where the genetic material was found) as well as 12 (where the body field wave broke down).

So it would seem that all we had to do was to correct these two compartments and the cancer might be affected. No, that did not work. I was not able to affect cancer one bit so far as clinical work was concerned. The progress on the cancer front was like inching along a precipice, with a great drop on one side. The great drop was when the treatment failed, which it always did. The client died.

For years I treated another man with asbestos-induced cancer of the chest cavity, and he always survived no matter what happened. It took him a long time to succumb. Why these people kept coming to me I don't quite know, but looking back, things were found out about cancer that we would otherwise not know, due to their continual visits.

But the idea of a full body wave acting together like a giant wave with millions of little waves within it was born, and the wave breakdown theory was born. This was in 2000.

- Cancer and genetics.

I do not doubt at all that there is a huge genetic component of cancer of some types, and that one day it will be better understood. The question is now, What is the basis of the

sudden apparent breakdown of the genetic material so that it gets so many errors that a specific tumor arrives in a specific place?

So far as bioenergetic research goes, the Compartment with all the genetic material in it is Compartment 10, and you would imagine that if you corrected the Compartment 10 the cancer might somehow be affected, but this is not the case.

The six pairs of divergent meridians are found in Compartment 10, and these make 12 separate meridians in my testing, although in the Chinese arrangement of things they are joined together inside the body in pairs. You can see them in any advanced book on Chinese medicine.

Also, one should indeed wonder why it is that one of the heart tissues, the cardiac muscle, is involved here in the same energy paths linked with DNA and RNA. This is extremely important as we think that the DNA is just sitting there inside a nuclear membrane inside a cell membrane, yet is now credited with all the activities of the body, and all the inherited disease patterns, as well as cancer. But what if some sort of field energy sweeps over the DNA in the heart of the cell, and this field information must become available to other parts of the body, so that each part knows what the other part is doing? This is the basis of a control system. So we might say that the DNA and RNA is *not* the absolute end of the story so far as cancer is concerned.

The human body field system is larger than biochemistry and larger too than genetics in its scope, yet we have only just in the last few years scratched the surface of it. Could the genetic errors just be part of a larger set of field errors, with the DNA part of this whole, rather than just at the end of the system? Yes, I believe so, if we don't want to end up in a cul de sac of our own intellectual narrowness.

Many of you will have already studied the effects of the NES Infoceutical called the Heart Imprinter, and will be aware of its strong effects on the body field. Does Heart Imprinter have any role in cancer at all? I ask this because of the very fact that the DNA seems to be linked energetically with the heart!

Think of the DNA as a dynamic system instead of just a sacred cow. There has to be a field that links all the DNA and RNA in the body TOGETHER, or the system can only work as a mechanism to replicate proteins. I think some geneticists will be with me on that one, for sure.

So we get the Heart Imprinter, and according to ancient knowledge (which is usually from a good source as it arises from meditations and lifetimes of observations), the heart is linked with the DNA in Compartment 10. So supposing we just linked those two Infoceuticals, and tried to see what happens... More of this later, when we have investigated a few more avenues of inquiry. For now remember that Heart Imprinter is made up of the Integrators that go with the four chambers of the heart.

Do not fall into the trap of believing that we are just packets of DNA. We have a huge interlocking body field in three planes covering millions of cells and thousands of specialized tissues, and the DNA takes up a very small place in Compartment 10.

I ask you also to remember that the heart is certainly at the intersection of these three body fields:

The blood and circulatory system

The lungs and the meridian system

The brain and the nervous system

And to this we can add the DNA and RNA, which, of course, make morphogenetic fields. When do they do this? When the heart beats, creating the energy for that other field, as it does tirelessly night and day throughout your life.

- Long Term Immunity and Cancer.

We have to remember that in the case of cancer, the immune system is switched off in a particular region of the body, while it remains intact over other areas. This is most curious.

However, some people really think that the thymus is important in long-term cancer patients, and one of these people got in touch with me just a week before I left Australia. The same fellow was also interested in the functions of certain enzymes, as he had a broad background in biochemistry. Stimulated by his inquiry, I did the test and I was able to get a field match between the thymus and the markers for cancer, so there was something in it worthy of investigation.

My interest also fell upon the cell nucleus, as that is where the DNA is to be found and where surely the morphogenetic field is to be found as well, or where it originates.

The idea then occurred to me to use the NES preparation Thymus Driver together with the preparation called Integrator 6 (Cell Nuclear Membrane), and this also is worthy of some thought. More of that later as well.

- Dr R G Hamer of Germany, and his famous dissertation, 1981.

In a profession that incites government authorities to breach human rights, in the case of the USA to burn books as happened I think in 1962, and allows for professional humiliation on a broad scale, and that closes colleges of opponents, and tries relentlessly to ban the material medica of existing professionals, it is rare to find a case as compelling

as that of Dr. Ryke Hamer. In his case, the authorities merely tried to stop him from practicing. (See the Biographical details on p 175 of his book, dated 2000).

Hamer is a very forthright proponent of what has been said now for many years by many people about energetics, yet he has codified the theory well and set it into a background of embryology, where the importance of the energetic disturbance to the germ layers is acknowledged. He goes further and outlines an exact bioenergetic pathway of what we would call the “tape loop” of the emotion stirred by shock.

This embryonic connection, but the way, is acknowledged too, by NES, in that the sequences of the Drivers as well as the sequences of the Integrators take on the same order of development as the embryo itself.

You must read Hamer’s book to fully understand his point of view on cancer, and pathology in general (Summary of the New Medicine” by R. G Hamer. Copyright belongs to the publisher, Amici di Dirk, located in Fuengirola, Spain. ISBN 84-930091-9-9*.)

But I was able to energetically test the outline of his theory expressed in his historic book, using the body field matching technique, while I was in Queensland, Australia, in 2000. Yes, it works! The pathway suggested by Dr. Ryke Hamer does stand up to energetic testing. In fact, it is so good and agrees with many observations of homeopaths and psychotherapists that his book is destined to become a classic writing of bioenergetics, if not allopathic medicine.

Hamer sees cancer as the end of a very long process of bioenergetic upset beginning with a shock, and the very long process is what he describes in his book, referred to above.

I don’t want to get too technical but if you are wondering why the organs are the apparent “target” of cancer, then Hamer has a very academic argument about the importance of the mesoderm, one of the three germinal layers in the embryo. Most of the organs are derived from this mesodermal layer.

What is now of particular interest is that he sees the things we in NES call the Energetic Terrains as harbingers of the healing phase, and that they are directed by the brain function. There is nothing new in this since homeopathic theorists for many decades saw that sometimes the occurrence of an acute disease of the microbial type hastened the recovery of a patient, and of course it fits with the better known but still great homeopathic law about healing proceeding from the chronic phase to the acute.

Hamer, to prove his point, wanted to take pictures of the brains of people with cancer, to show that there are indeed foci in the energetic sense that create what we might now call high frequency phase-shifted oscillations that severely upset the body field to the point of causing serious disease. The response of the medical professionals was to stop him from getting access to radiography. There are many pictures of brain scans in his book, which

is a must read. If you have no time, at least read pages 11 to 14, and the biographical notes at the end.

The medulla, the part of the hind brain that harbours all the conflict and is a major part of the tape loop theory used by NES to explain shock, actually will match all 12 of the NES Integrators. But we have found that the use of Integrators is not enough.

For those interested, the tape loops generally can be treated using NES Infoceuticals as listed below;

Nerve Driver
+
ES-1 (Immunity)
+
ES-8 (Chill) all mixed together!

This has been dubbed the “sanity formula” (and should be used on doctors and politicians generally!). And of course by those of us suffering from many tape loops at once—which is all of us! ES-1 has the effect of clearing the head, when there are low level microbial diseases in the brain itself. Nerve Driver is to restore the correct “sounds” to the brain. Chill is for sedation.

How do you know when someone has a tape loop problem?

Poor sleep—waking in sleep

Odd patterns of behaviour—repeated errors of judgment

Chronic low-level Energetic Terrains (viral soup, which is many Terrains together)

Noises in the earss—tinnitus

Heart pains, but no cardiac pathology

Hyperactivity of mental processes

We live in violent times where even medicine is increasingly violent. You can quote me as saying that.

So impressed was I with Hamer’s theory that in the year 2000 I developed a set of 12 emotional correctors for the tape loops that won’t cease playing all our lives. These were never used, but have been used in testing the effects of our Energetic Stars, which of course can be used to help. That is how I tested the formula given above.

- So do we have a cancer treatment?

Back in 2000, I was looking at the Drivers we had developed, and found that some of them would match with the cancer marker ampoules in a field test. These matches are important and can now be listed;

Cell Driver

Immunity Driver

Thymus Driver

This is of some clinical interest, but I regret to say that these do not “cure” cancer. The word “cure” is for journalists and people who know nothing about medicine. In bioenergetics we don’t use the words “cause” or “cure.” Why? We are not journalists. The client does the healing, not you! But the fact that some elements of the NES bioenergetic system were able to match with the cancer markers was somewhat interesting since our main objective is to kick start the inhibited immunity in the cancer patient, as an emergency treatment.

The problem between 2000 and 2006 was that there were just too many leads for cancer, and the disease is so complex and mystified by patients that chances of success with so many approaches at once merely means that the treatment fails.

We had all at time three Drivers, and the first and last pairs of Integrators to use for cancer, and then there was the theory that all we have to do is correct the genetic errors somehow using the sets of Integrators that form special combinations. Nothing seemed to have much effect on cancer in the clinical sense. It has not been studied systematically, since there is no absolute need to do so.

By 2002 I had a set of ten cancer markers going from the normal cell, to dysplasia, benign growths and so forth right up to Cancer 2. All we had to do to test the efficacy of a proposed cancer treatment was to see how far down the scale of these ten ampoules the Infoceutical would push the match, indicating a change in the client’s condition so far as theory was concerned. This turned out to be a really bad way of evaluating the efficacy of the proposed treatment! Because so many times the treatment looked good but did nothing at all.

Appearances can be deceptive in bioenergetic research. Remember the rule? If it’s going to work we have to see changes within three to five days! A hard thing to remember, as hope is always stronger than your skill at healing!

- Heavy metals and Compartment 11.

There are myriad toxins the body has to deal with. And it does. But some people succumb to them and others don't. Why?

After many years of testing and evaluating people with breast cancer, I have to say that the one common element in their plight was the high levels of heavy metals found by bioenergetic testing. But remove the heavy metals as fast as you can, and there is still the MEMORY of the heavy metals that will continue to block the field. Lead, cadmium, and mercury appear to be the worst ones, and they all seemed to have an affinity with Compartment 11, which includes the Stomach as well as the bones and marrows. Obviously, tin will also be pretty bad, but it is rarely found in the body.

The Infoceticals for Heavy Metals do match with the marker ampoules for cancer, however, and this is because they block the field so well that they cause the control system for growth to be destroyed. But, of course, only where they are found, and they are not found in the blood so much as in the neural tissues and bone marrows. Here is a whole area of knowledge that is available for you to peruse on Google! Let me say that even if you get rid of the heavy metals—and they come and go in the test over some months—it will not get rid of the cancer!

Let me also say that just because nearly all breast cancer clients have heavy metals that register in the NES test, does not mean that there is any cause or cure relationship at all. I think it is wise however to try to get rid of the heavy metals quickly, although only of the client is well and strong. Detox takes enormous energy.

- Geopathic Stress.

Geopathic stress is studied a lot in Europe, and mostly in central Europe, where there are many already used underground water sources, caves and coal deposits.

For example, there are Hartmann Grids, discovered in 1950 by a German doctor called Ernest Hartmann. Here are also Curry grids discovered by a Swiss doctor, Manfred Curry. Data you can get on them is confused and woozy, and has no science to back it. It is also clear that objective magnetic devices have trouble picking up these energies, waves, fields, or whatever they are. They form lines, which make them sound like fields, which will form standing waves, with lines along the earth being the standing wave. No frequencies are given, so it is basically a scientific black hole.

It turns out that these lines are traveling patterns found by dowsers, and nobody else. Seeing that dowsers discovered a lot of the tin mines in the UK, and they still find underground water in many countries, they are worthy of great respect because of their

usefulness to humankind. Their skill have been known and appreciated since Roman times and before that.

If you think that these Earth energy lines don't exist, then you can be like the multinational oil companies and use gravity traversing techniques that are supposed to plot slight variations in gravity, with an immensely heavy gravity meter, which is carted around and finds the oil because it's in cavities, which are known to cause minor fluctuations in the lines representing gravity.

Seeing as gravity is probably inherent in things themselves, it is puzzling to me that a gravity meter is in fact called that. What it measures is not known. It could be that the gravity meter is really measuring geopathic stress.

There is no such thing as a gravity wave, nor a graviton particle, so you are directed to the Milo Wolff model of the electron, where the electron in-wave is supposed to account for some of this. The interaction between magnetism and "gravity" is acknowledged widely in physics. If, and I am sure in my mind that I am right here, the influence of the Earth is able to alter the in-wave of the electron, then it will not be behaving correctly and human physiology will be distorted by the effect. Like all the manifestations of the in-wave and the out-wave, they can only be measured by resonance coupling devices, and I suspect the gravity meter as being one of these types of devices.

If you are not a dowser and don't have a gravity meter, you may watch cats (which like the distorted in-wave, and dogs, who do not. Look at where they like to sleep and go with the dogs, not the cats!

Dowsers and Hartmann gridologists and Curry gridologists say there are negative and positive aspects of their "lines", and in terms of the Wolff model of the electron we can say that they may well be referring to the top and bottom of a wave apparently of a very low frequency, since the distance they are apart from one another is of interest here.

So we are now getting to the point. Very low frequency in-waves can upset the mammalian metabolism, so that you can get spots on the Earth's surface that are conducive to sickness. Every—and I mean every—ancient civilization knew this. The Chinese civilization, being a very old one, still has "wind and water" as being "bad" energy (wind is from water, or the underground streams).

As for its supposed effects on cancer, I can report some research where I found that the Earth energy (can we call it that?) at one point is not the same as Earth energy at another point. I was able to read off sets of numbers that indicated a very slight change occurred in a place said by local Australian aborigines to have "bad" energy, to the point where those who lived there developed terrible diseases. I treated a man who lived there as he developed severe bowel irritation and ended up in hospital having the bowel cut out. No, he would not move his house, which he built on a flat plain surrounded by hills, near a river. Do not do this.

I have suggested a link between the cell nucleus and the “bad energy” of the Earth, and have found that Cell Driver is the one to use in the NES system. The experiment was using things to represent the Curry and Hartmann grids. I do not know of anything else that helps because I have no evidence from my own testing. Perhaps now you know why Cell Driver is used with all treatments suggested for neoplasm. It is to counteract geopathic stress. In my languages it is to correct the in-wave of the electron.

Bear in mind that government authorities do have cancer maps showing cancer clusters near to major polluting industries, as well as other things like land forms. These maps may be available under freedom of information laws in some countries.

It occurs to me that the presence of heavy metals in the body may exacerbate the geopathic stress effects that are so upsetting the nervous system function.

- The Energetic Terrains and cancer.

In 2004, a nice hardback book appeared from Michael Beatrice, a long-time friend from Australia, whose devotion to natural medicine knows no bounds. He has for decades supplied me with things that have turned out to be useful in developing a scientific basis for our endeavours. This time it was “Microbes and Malignancy”, by Julie Parsonnet, OUP 1999.

Inside was a complete academic account of the “bugs cause cancer” theory, which has been a major thread in cancer research for all of the last half of the twentieth century. And research from this thread of cancer research has led to the award of several Nobel Prizes. Yet the direct link between bugs and cancer has never been demonstrated for all types of cancer, and it remains a branch of investigation that is now semi-respectable.

If viruses can cause genetic damage (which they do), and if viruses can disable the immune systems (which they do), then they can in some cases be oncogenic. They are just another factor in the multifactorial causality scenario which is now popular.

But that was not the end of the story, as it would be if we paid much attention to the orthodox. In fact the list of the suspects in the oncogenic bug book read like an almost exact copy of the families of bugs I had outlined in the list of 15 or so Energetic Terrains. I was almost totally unaware of the scientific work outlined in Parsonnet’s book. So how did I independently come up with energetic verification? Coincidence perhaps?

The NES Energetic Terrains are made up of energetic corrections for various viruses and a few bacteria that show up a lot in clinical practice, and they are ones that are very resistant to treatment as well. In some cases, like CFS and Helicobacter, the effects of the bugs are not acknowledged by large numbers of allopaths, and there is therefore little want or desire to treat them in any way.

So what is the nature of the “Terrain” of these Energetic Terrains? And why are they so hard to treat? Here it is worth looking again at the apparently heretical writings of R. Hamer, and I am suggesting this because of a curious observation I made in the last few weeks about the Energetic Star 1, for immunity.

All of us know about some people (never us of course) who get sick on their holidays, or get sick after the school examinations, almost as if they are manipulating their sickness to fit a social programme. Or of course people who are too sick to go to the examination, and have to get special consideration. So a link between a major body field pathway (this is what the Energetic Stars really are) and emotion is quite an important leap into what many people have been saying for thousands of years. As Ryke Hamer says in his book, on page 164, “Only in the twentieth century is this information lost to physicians and scientists.” There is a link between immune function and the brain function. The emotion in question, concerning Energetic Star 1, was one that affects the urinary system as well as the whole brain tissue. The Kidney and Bladder match to parts of the brain, you see, as well as to the urinary system itself. This is used, and corrected, in Energetic Star 1. So wonderful in its effects are those of ES1, I have been calling it the “sanity” remedy.

Trying to get rid of large numbers of Energetic Terrains when they are apparently symptomless is very hard on its own. So something is needed to kick start this process. The immune system can be stalled by the brain itself, so we have to treat the brain, and not just the tissue but any possible foci of activity. There can be more than one focus of course.

Energetic Star 1 can be used here. Heart Imprinter of course can be used if it comes up in the NES test. Your client may unconsciously “block” the treatment mentally. This is so common as to be hardly worth mentioning, but we try to mention it again and again. It is not done at a conscious level of course—that would never do!

Later on we shall see just why it is so important to treat the Energetic Terrains in the right order, even if there are no apparent symptoms. For now, bear in mind that all of the emotions have a special place in the medulla of the brain, a deeper level structure of the new brain which is of great interest to us.

- Broad spectrum virus comments.

The broad spectrum virus Terrain is just one of many Energetic Terrains, but it is nevertheless a very important one for cancers at several specific locations: prostatic cancers and cervical cancers. Oncogenic viruses are apparently produced by some people but not others. This will depend on their energetic morphology, no doubt. BSV, as we know includes Human Papilloma virus as a family, which has 74 members of which only a handful are oncogenic and the rest are harmless. So is the oncogenicity tied to whether or not it is of a particular strain or not? Not a very convincing scenario for me. What if the virus is there because immunity is switched to the “off” position, and the

same error, that is, the focus in the brain, also produced interference patterns and phase error that cause the immune system to fail in one area, due to an effect of the field created by the nervous system to that organ?

BSV also contains Divergent Meridian quads that will match with Human Wart Virus, (HWV), and some strains of these are said to be oncogenic as well, sometimes but then not other times.

The very large family of Herpes viruses is also included here in BSV. This will therefore include some types of hepatitis.

How do we get a “Terrain” if the immune system of the body actually works? Well, do not ever forget that the switch for the immune system is not in the stomach, but in the brain, many places in the brain. So it may be that the Terrain is a no-go area for the immune system. It could be an area of tissue where phase shift has occurred in the cells, and they are being replicated with that phase shift error in them.

Surely we are not able to make much progress with the Terrains we should forget and start working in the switches in the central nervous system? Yes, yes, and yes.

Then what should we be doing to the nervous system to make it stop switching off the immune system via the nervous system field? Will it be detox? No, we know this is a function way down the list of the body’s jobs. And sufferers tired from chronic disease dislike the extra energy expenditure of detox. Will we alter the nutrition for the nervous system? Will we “boost” it, as the natural healers think they are doing? Well, we have to work out what on earth goes so wrong with the nervous system in the first place.

It turns out the Energetic Star 1 is useful with the immunity and the nervous system, and it corresponds with the body’s list of things to do—protect the body from invasion by foreign proteins of any type. And the great thing is that Energetic Star 1 links as well to all the brain tissues, for emotional upset generally.

Emotional Stress release (ESR) would perhaps not be your first choice for a cancer treatment, let alone getting rid of a Terrain. It really consists of Integrators 1, 7, and 12, which represent the start, the middle, and the end of the body wave. So what are we doing here? Correcting the general shape of the body wave. That is the name of the game in all serious diseases. The disease is the name of the result of the breakdown of the body wave, not the name of the cause of it.

There is enough there to make you think seriously about your approach to healing as a whole. If your world is falling apart, let it! There are rewards for doing so.

- Cancer and the three axes of the body field.

The Big Field Aligner Infoceutical is a favourite, and very often its use will chase out unwanted emotions. So here we are thinking of one field blocking off another completely due to a major misalignment of the three axes of the body field. If emotion is affecting the whole body, it will surely show here, early in the move towards cancer. In other words, it is an early warning device for emotional trouble. Remember that to get anything like cancer, the field has to be completely cut off in a whole region of the body field... a whole organ in fact. If an organ's information stream is to be cut off, the nerve to the organ is the obvious pathway. These nerves originate in the spine in most cases.

So if this is the case, there will be blockages of Big Field Aligner, of Integrator 3 and 5 together, since these will represent the spinal cord and the pons.

- Summary of the information so far.

NES Infoceutical "matches" may or may not be of absolute value, but have to be understood, if they show up repeatedly in the NES test. The following Infoceuticals will not "cure" the cancer but will help you to understand how the body works:

1. Big Field Aligner
2. Heart Imprinter
3. Cell Driver
4. Immunity Driver
5. Thymus Driver
6. First and last groups of Integrators (but ESR is better)
7. Environmental Terrains 1+2+3 and others
8. Energetic Stars 1, 3, 8, 14, and 15.

- The Energetic Stars.

The Energetic Stars are merely combinations of other NES Infoceuticals: the Drivers, with Integrators and Terrains and other things to influence the nervous system, like the ESR formula. They describe things that go together often. Nothing more. There is no mystery here. They are simply pathways that get blocked a lot, by ourselves and our fears and angers and desires.

There is always an attempt to externalize things that happen to you, and of course we like to externalize the cause of disease as well. Sometimes it is valid, and other times not. This is not a useful way to go clinically.

We shall say a lot more about the Stars below. But bear in mind that *you* are not doing the healing with the magic drops, and people who say this are right off with the fairies. Efforts must be made to get client to realise that it's the client that does the work, and the therapist who simply creates the opportunity.

- Cancer and the heart.

Pains in the heart frequently attend the cancer patient, and the heart is supposed to have nothing to do with cancer of course... but it's the key.

In bioenergetics, the heart is not pumping so much as regulating and imprinting *information* into the body via the blood, connective tissues, and nerves.

Here again I have to thank Michael Beatrice for his promptings about this, since he sent me some interesting material about the functions of the chambers of the heart. He pointed out that you could have four Integrators, one for each heart chamber. This led to the creation of a Heart Imprinter Infoceutical in 2005. The information was about the extra meridians, but it turned out that we could assign an Integrator to each chamber of the heart.

The heart can be energetically upset quite badly by a very few allopathic drugs, and needs to be corrected often if the client has had a lot of tetracyclines. We have been talking about the heart and its energetic functions but of course its role in emotion is legendary and even allopaths will know about that. Emotional upsets will inevitably affect the heart's ability to do its job of imprinting, regulating, and even pumping a little.

The heart also has a job of integrating the three body field axes. And if it cannot do this, there is trouble. By trouble I mean there is disease. Heart Imprinter is not just another modern day Rescue Remedy, but a way of creating stability in the body field, and thus of making the field stronger. The incredible thing is that the Imprinter Infoceutical actually makes a field connection with Integrator 10, the place where the DNA and RNA are found. Genetic material is nothing until it creates a field, and then the field can communicate with all the other bits of DNA in the body. In creating the idea of the genome, researchers actually have to resort to a field to get the scanning to work...the DNA has to be activated magnetically before it will give up its secrets.

For those who enjoy what gurus have to say, you will hear rumours that the gurus think that the failure of the heart energy is the key to cancer. So it is not surprising that cancer producers get pains in the heart.

AND we don't even need to give them things for angina! It's not angina!

- Special use of Energetic Terrains

Rules have to be bent slightly here as the Terrains are normally to be used in sequence, and at a certain dosage and in a certain way. Remember that in cancer you may not have a huge amount of time. So, a slight change can be made in the use of Energetic Terrains 1, 2 and 3 to speed things up. They have a very specialized effect when they are used all together, yes, mixed in the same glass. That is the meaning of “together” in NES.

These is a reason why this is so, and this will be discussed later. If there is any indicator in the NES test of abnormality with ET 1, 2, and 3, then all three are to be used together. Use ten drops from each bottle into one glass of water. Then this dosage is repeated morning, noon and night, and all other drops are suspended for the while to allow for this special effect.

Common sense, for those who still have it, decrees that if the dose is too high it should belowered, if if there is no effect it should be slightly increased. This combination is well tolerated in my experience.

- How can we explain the “location” of a cancer without recourse to genetics?

Simply, there is no satisfactory explanation of cancer location to be found from genetics. There is however some useful idea in the work of R. G Hamer, late of Germany, now resident in France against his will, who gave us the idea of a focus of energetic disturbance in the new brain either in the pons, the brainstem, the medulla or even the cortex. Hamer is said to have been able to tell where in the body a cancer is found by looking at a CT scan of the patient’s brain instead of at what the radiologists wanted him to look at. He looks the “artifacts” the things allopaths don’t want you to look at. He finds that concentric rings beginning from a brain focus may possibly be used to pinpoint the cancer, and this is of tremendous interest since the energetic testing I have done for years with cancer cannot predict reliably where the cancer IS.

There is no doubt that the source of the cancer, the focus in the brain, should be treated. And how can this be done? That is the purpose of this writing—to get you to understand HOW. Integrators will tell you which part of the brain the focus might be found in.

Integrator 3+5 together—indicator of spinal cord and back midline

Integrator 5—the hind brain

Integrator 6—general indicator of the brain tissue

Integrator 7—the cortex may have foci

Integrator 8—some of the visual apparatus is upset due to a focus

Integrator 9—the auditory apparatus may have a focus

Regretfully I have to say that just giving the Integrator is not going to “cure” anything.

I am making you aware of these links so that you might learn at a deeper level of understanding. It will also help you to understand the NES test better. We just do not understand what a focus really is. One day I hope we do. It is likely that the foci are patches of tissue that are highly distorted in phase in the Wolff sense.

As such, these foci seem to respond to things that make phase more normal. These are the already known treatments for shock. But treating shock is hard because of memory, which will not let the shock just disappear.

- Limitations of NES–Professional

The body field reacts so badly to all types of shock that it gets very distorted and will not let you find out whether there is cancer or not, or even what the location might be. The NES–Professional is designed for general use, and is not really designed for anything other than general treatments. It is simply not to be used for diagnosis or prognosis in the medical sense, and it was never designed to do this, as I have said.

The Infoceuticals were designed to be of general use and not for incurable diseases, and in particular ones that are severely resistant, like cancer.

A BIOENERGETIC THEORY OF GENERAL PATHOLOGY

In studying the arrangement of the electron as suggested by Milo Wolff, it soon became apparent that we might be able to read off more information than we previously could from the Infoceuticals themselves. When, in our theoretical model, spin was abandoned, and replaced by the phase shift between a possible zero degrees and 180 degrees, it became possible to assess the Infoceuticals differently.

In early 2006, measurements were made on the Integrators, after it was found that, by doing a few preliminary tests, the matching was set up for sequence to the left or sequence to the right, which is something that makes the “phase” values appear. It is assumed that the numerical values refer to degrees.

We have here an explanation at last for the system apparently “ending” at Compartment 12. You can see that the phase values are almost all neutral over the frequency range. The Integrators are then giving some stability to the energy system of the body.

Compartment Number	Normal phase advance relative to Frequency
1	0
2	0
3	0
4	0

5	0
6	-5
7	0
8	0
9	0
10	0
11	0
12	0

In the arrangement of the energy using Wolff's theory, these 12 compartments relate to powers of ten in frequency that are representative of the "outward" or exploratory wave. It means that the out-wave from the heart, the one that appears to activate the DNA and RNA, is very sensitive to phase error, and this indeed may be what is able to damage the DNA beyond repair in the case of cancer.

If you think that is far fetched, then consider the case of a phenomenon called cavitation, a process that can completely destroy ship's propellers, simply by the phase error which occurs because of the movement of the propeller in the water. Over a time, the propeller is destroyed, even if made of strong metal alloys.

So it is of interest to consider cancer as biphasic, the first phase being the destruction of the arrangement of the phase of the out-wave, or the 12 compartments, followed thereafter by the similar destruction of the in-wave, the one that will be more likely to create havoc in the DNA, the chromosomes and anything that is at all orderly. Hence primary cancer is followed sometimes by secondary cancer.

Indeed there is no need to consider this scenario as some special case of cancer, but as a general theory of disease, which is indeed biphasic, so that there are clearly observable stages of a disease, which of course until now were completely unexplainable.

So what about the theory of the secondary phase of cancer being due to the cells migrating from one part of the body to another? It is a great theory but no one has ever detected over the decades of this theory any of the cancerous germinal cells in the blood. Instead we have a new way of looking at it: the severely phase shifted backwave, or the in-wave, will upset the corresponding out-wave starting with Compartment 12, giving a secondary growth in the pancreas or liver, then Compartment 11, giving a secondary growth in the marrow or stomach, then Compartment 10, giving a secondary growth in the Circulatory system, Compartment 9, the thyroid, and so on.

This means, according to logic, that no one will ever recover from secondary cancer where the primary growth has not been cured or excised. This fits with reality.

What wave are we talking about? I mean the aggregated whole body wave, and immensely complex aggregation of all the aspects of our body, all in a single simplified unitary wave.

If I am right, I should be able to do a test of the markers for primary and secondary cancer. I predict that primary cancer will show an advanced phase shift, or a move to the right, and secondary cancer will show a negative phase error, or a shift to the left.

- We are looking for a medicine that makes sense.

Many times in the case of allopathic medicine it is necessary to suspend the function of the intellect in order to accept the latest theory, one which we know will have its place in the sun, perhaps for a decade, only to pass on into the oblivion it deserves.

Scientific American put out a Special Edition, a few years ago, entitled promisingly “The Science of Staying Young”. It should have been called “The Science of Staying Alive” because it was actually about cancer research.

Apparently there are now six things that allopathic research doesn’t understand about cancer, according to W W Gibbs, July 2003. We are glad it’s only six. For “don’t understand” read “does not fit biochemical model of medicine”.

Problem 1.

The “go” signals for cell division are not understood. Yet mitotic radiation, a feature of cell division, is surely a field effect, given the word “radiation.” So why are we looking for a chemical answer to a bioenergetic problem? Body cells need a start and stop message from the body field to control the morphology of the body. So surely logic would have it that if cancer cells do not have such signals (at least, stop signals), then what we need is to find the energetic shield that cancer cells use to block the human body field messages.

Already there is little doubt in my mind that the answer to pathology lies in correcting cellular phase error of the electron in specific areas of body field activity. Normal cells and cancerous cells will have different phase characteristics.

Problem 2.

The neighboring cells when squeezed by cancerous tissues issue “stop growth” messages. These will of course be in biochemical messages, but they meet their target by field effect. The message may well be a phase value. The cancerous tissue does not respond to these stop growth messages, simply for a bioenergetic reason.

Problem 3.

In normal cells, when genetic damage reaches a certain level, the cell will destroy itself, or, to put it more clearly, it will die. This rule does not apply to cancerous cells either. Is this a problem of genetics or of field switching mechanisms?

Problem 4.

Tumours need oxygen and blood-borne nutrients to survive. New branches of the blood vessels are sent out to irrigate the cancerous tissues. This means that an aspect of the circulatory branching activity is unable to distinguish body tissue from cancerous tissue. This does not really sound like a genetic error problem, but a field matching problem.

Problem 5.

While normal cells will die after about 70 cell divisions, cancerous cells can divide for longer periods. So cancer cells lack the same switching mechanisms found in normal cells. Is this a switch created by the body field?

Problem 6.

At a certain stage, the cells of the cancer are supposed to magically get up, detach themselves from their tissue home, and go into the blood and find another organ. This is in spite of the fact that tissues don't do this ever in normal human beings. The migrating cells have never been spotted, but we know they are doing it, maybe at night.... The bio-energetic theory concerning the electron function plus the idea of scaling will account for this without needing to have cells traveling in the blood.

So what's wrong with cancer research? It was like giving the job of fireman to the local pyromaniac. Doctors have the capability of making cancer much more of a problem than it ever was. Would you expect a person with no knowledge of bioenergetics to solve a bioenergetic problem, even after a very, very long time?

- Further research on the NES phase shift theory, 2002 to 2006.

By 2001 I had developed no less than 10 in a series of phase shift markers for the cancer dynamic process, a process of change from normal cell activity to the highly specialised cancer cell activity, which I have inadvertently described to you above.

These 10 markers were all found after repeated testing over the years to belong to not one but two separate compartments—Integrators 10 and 12. So we are looking at Compartment 10 where DNA as well as the circulatory system is found, and in Compartment 12, which is the Integrator where we find the breakdown of the wave, and which is where we think the polarity of the electron might switch from negative to positive.

It was in late December 2005 that I finally got around to testing the ten cancer markers for their inherent phase value within themselves and not in relation to the Integrator/Compartment system. What happened was indeed a mighty lift to the theory.

Test Marker Number	Description	Phase value in degrees, advanced.
--------------------	-------------	-----------------------------------

1.	Normal cell	+0
2.	Dysplasia	+2
3.	Benign growth	+6
4.	CIN-1	+10
5.	CIN-2	+18
6.	CIN-3	+24
7.	Transformation	+32
8.	Primary Cancer 1.	+36
9.	Primary cancer 2	+43
10.	Secondary Cancer	+45.

What I am saying is that there is a “normal” range of phase error that is matched with that frequency by a physical law. If the body field extends beyond this error in Compartments 10 and 12 at once, then there is cancer, because the body field loses control of the cell division mechanisms as well as many others.

The other thing we have to say is that somehow the cancer markers I had developed late in the 1990’s were really measures of phase and could be arranged in order of cell degeneration.

The CIN-1, 2, and 3 relate to a system of describing the state of the cervix in the stages towards malignancy. (CIN is a technical term used by oncologists. These terms are defined in a book by Albert Singer on cancer.)

The race was then on over Christmas 2005 to identify the things that might cause phase shift to advance, and if you thought an easy answer is available then you were wrong.

- The last day of 2005

I was deeply worried about the phenomenon called spontaneous remission, wherein the patient under the death sentence of statistical interpretations of biology suddenly loses the cancer, which is excreted suddenly via the skin, or other pathway, and is apparently cured. The word “spontaneous” I take issue with, since nothing is spontaneous in this universe, as everything has a real cause. So the word spontaneous is used in the sense of “idiopathic.”

I realized that if we had any sort of immune system at all and if it was at all functional, it would be impossible for the phenomenon of the Energetic Terrain ever to occur for more than a few days. Most immune crises can be overcome within five days to a month, if the immune system is working. Remember that the cancer marker set, developed decades ago now, never matched to anything at the time of discovery.

So, if there was to be a possible idiopathic remission, then it had to be the immune system starting to work again after a long period of being disabled. After all, there does not seem much possibility that in idiopathic remission the patient suddenly corrects 100 or more genetic errors by some amazing mental feat!

Moving forwards, we had to consider that it was possible that the viral infection in the Terrain was actually a cause of phase shift and this is what caused the disease, rather than the virus itself, which is merely a way of introducing phase error at a certain frequency range. The only thing to do was to test the Energetic Terrains for positive and negative phase shifts, something I had never done before but that now seemed an obvious path.

Here are the results of those tests.

Energetic Terrain	Backwards Phase Error in Degrees
1.	-2
2	-5
3	-12
When ET 1, 2, and 3 are combined, the backwards phase movement is 45	
4	-15
5	-22
6	-26
7	-32
8	-34
9	-41
10	-45
11	-47

12	-49
13	-55
14	-59
15	-60

All of these Energetic terrains, singly and together, were able to correct a distorted body wave by making a substantial phase error in the backwards direction, making the whole body physiology more correct. In fact, it was clear after a few days of thought that the whole of pathology, not just cancer, could be explained in this way. Why? Because no disease occurs in just one place at one time; there are always multi-locational symptoms that come and go periodically, and no theory of pathology has ever been able to explain that, until this one, now. . . .

So we have to say that the aggregated body wave behaves as a single unit, and consists of three axes, one for the blood and heart (Integrators 2, 4 and 10), another for the lungs and the connective tissues (Integrators 2, 3, 4, 6, 7, 8, 11 and 12) and yet another one for the nervous system (Integrators 2, 4, 5, and 6). Once there is phase shift of the whole integrated system of body fields, then we have true chaos, and control over growth and morphology is lost in very specific areas. To correct it, all we have to do is understand how the three body fields are folded together—perhaps in much the same style that proteins themselves are folded.

I am saying that cancer and indeed other serious life-threatening diseases are certainly about failure of the full body wave and not just individual compartments within it. I say this because in treating cancer, using Integrator 10 and 12 does not have much effect at all, or any that can be measured, or observed.

- Historical antecedents of the phase theory do exist.

Two centuries ago, before medical chicanery destroyed the homeopaths forever, closed their colleges and disempowered their members, there were people who made observations about what happened clinically, and they actually saw, touched, smelled and felt their clients, and even talked to them for long periods. This was due to the unfortunate need for getting data from the client, called “taking the case”—something that could take up to an hour of the doctor’s time. Because of this close observation, a huge amount of data was accumulated about the process of disease, data that seem irrelevant and even baffling today.

It is observed that the appearance of an acute viral or even bacterial disease frequently preceded remission from another seemingly completely unrelated disease. Now we are proposing that all diseases are interlinked with one another, and that they all are part of a systemic skewing due to phase error in a very specific way. So the onset of even an acute

bacterial disease could mean the end of another disease, and the idea grew up eventually of giving “nosodes”, or homeopathic imprints of bacterial and viral diseases. These were of course given in very high dilutions and were never dangerous, until the modern regulatory authorities decided that there was no clinical evidence for their use. In any case, the idea was to “induce” an acute phase of the disease. And sometimes it worked!

Reason would have it that if the client was able to have an acute disease episode as part of the “cure” of a disease, then surely the immune systems were working well. The symptoms of disease are mainly produced by the activities of the immune system rather than by the micro-organism itself. This is not the case where organisms produce large amounts of toxic matter.

For those interested in the history of medicine (very few are), then you will now realize why the homeopaths ranted for a decade about the allopaths causing “suppressions” of diseases that would merely cause another disease to manifest later on in the clients’ life. This indeed may be one of the side effects of suppressing diseases with antibiotics, to which the homeopaths still have an aversion. Whether or not this is the case I do not know.

So while the “acute diseases help repair forward phase errors” idea is appealing, when you have an immune system suppressed in its activity in a particular place, as we do with cancer and arthritis, we still have a problem. How do we get the immunity compromised specifically to the place where the cancer appears?

Energetic Terrains in practice don’t do a lot for very complex disease states, although their use may shift phase a little in the right direction for the whole body wave. Certainly they are not dangerous because they don’t have any trace of the pathological energy of a virus in them. They are simply NOT NOSODES. Homeopathy is ...over. Energetic Terrains, if anything, appear to work like mini genetic-error correctors. Viruses do cause mini genetic errors.

Instead of nosodes, our mainstay here is something that looks like viral particles, whose existence is quietly acknowledged these days. We believe they are corrected for in Energetic Terrain 1, 2 and 3. If one appears, and the disease is serious, we use all three together. High doses are used, and the doses are given three times a day—at morning, noon and night. High dose means 60 drops.

We adhere to our rules and use Energetic Terrains 1+2+3 TOGETHER, which means mixed in the same glass this time, one of the only times we ever do this. A 45-degree anticlockwise phase shift is well worth it for most people with chronic illnesses. These Terrains seem to have a self-multiplying effect, which is marvelous. These need to be treated FIRST, according to our protocols, and this is still correct.

So, if we have now established an argument that says that certain viral and bacterial groups are able to shift phase towards normal, then what on earth is shifting the phase of the body wave AWAY from normal in the first place?

- A consideration of genetics as a way of getting forward phase errors .

Genetics has not fulfilled its early promise of making a new era in medicine. So we need to go in another direction entirely now. And here is a suggestion. Perhaps it is not the sequences of the genome that are so important, so much as the field in space that the chemical arrangement makes when energy goes over it. The genetic material is not like the spiral-shaped structure shown so proudly in text books. It is all scrambled up, hidden in the middle of the nucleus away from the body, with the nuclear and cell membranes separating it chemically from the rest of the body. So how on earth can it be the control system of the body?

Cell metabolism means that electron fields, the in-waves and the out-waves, will ripple across the genetic material wound up in the cell nucleus many times a second. The metabolism of the DNA and RNA itself will create more waves.

The DNA field idea was suggested for years in a series of books by Rupert Sheldrake, English biologist and writer. He never got into the dynamic version of the field that we have, but certainly he realized that the body may well have a morphogenetic field, and the concept is beyond reproach in modern quantum biology.

When it comes to describing what can go wrong with the morphogenetic field—a sort of totality of the DNA expressed in space—we have to leave the electromagnetic world of Rupert Sheldrake and enter the world of the electron and the Wolff theory about phase in order to explain how disease can happen at many levels.

As usual, there is nothing new under the sun and intelligent humans of other civilizations long before us have grappled with this idea. In the famous standard work on Chinese medical theory written years ago by Manfred Porkert, and translated from the original German into English, we find a full description of phase energetics, which turns out to be the basis of the theory and practice, for that matter, of Traditional Chinese Medicine (TCM). The book is called *Theoretical Foundations of Chinese Medicine*, a very daunting title. Read it if you can.

The book describes the very basic ideas of the Chinese meridian system, where we have an upper system, combined with a lower system, which are in tandem. There are six energy channels in each, making a total of 12.

Curiously, this mimics the double spherical picture of the Wolff model of the electron. Wolff has two spheres of infinite size that move apart from each other or can combine in the same place to make one apparent sphere.

In TCM, Heaven is found above the diaphragm, the upper set of channels, in the arms and the head and the chest cavity; and Earth is found from the diaphragm to the navel; and man, the interaction of the two, is found below the navel. The body is considered not

in the anatomical position, but with the feet apart, hands stretched up to heaven, with the sage facing the east direction. The energies of Earth enter via the ends of the meridians in the toes and the feet, and the energies of Heaven enter the body via the tips of the fingers, outstretched. Very philosophical, but we are looking for the essential science within the philosophy.

Here it is: the outermost layer of the meridian system, most distal we might call it, is called Tai Yang, after the Sun, the source of the energy of Heaven. The next layer the dawn, or Yang Ming, and the innermost layer the Shao Yang or intermediate dynamic energy. The system is of course dogged by the yin-yang theory, which is totally unscientific, but permeates TCM. Each of the above has a partner meridian, Tai yin, for the Moon's energy, Middle yin, then Absolute yin, meaning most inside.

So a circle is drawn, and we can draw in the meridian sets on the two spheres, upper and lower, which will show the 360 degrees of the sphere divided into six parts of sixty degrees. A phase shift or change in TCM is that of 60 degrees to the right. It goes clockwise. So the TCM meridian is described by its position on the spherical structure.

Now think of the Wolff model of the electron, and see that, although the TCM version is not very precise, it can explain in a roundabout way that there is a different phase or position in space for every one of the 12 main energy channels in the body. Crazy Europeans have been very slow to grasp this.

Acupuncture was introduced into England in the eighteenth century, only to be dropped almost entirely because it was never understood. But the Chinese perhaps never explained it well. These things get lost in antiquity. Still, the idea was there that each meridian was open to internal as well as external influences. Now we might say that the yang energy is solar wind and visible radiation, and that yin energy is the 6 to 8 Hertz magnetic frequency belonging to earth, produced by the earth's magnetic core as a wave in the biosphere. These are the forces the Yellow Emperor's physician so long ago would have referred to as the mysterious powers of Heaven and Earth.

Operators of the NES programme will realize that when you combine elements of the phases from the two spheres, you get something that is like genetic field energy. We simply use Integrators 1+7, or 2+8, or 3+9 together and we get a "match" relationship with the morphogenetic field!

This is tantamount to making a forward or clockwise phase shift, and the extent of each is believed to be a normal progression, and is listed below;

Morphogenetic Combination	Forward phase shift in degrees
1+7	+9
2+8	+11

3+9	+15
4+10	+25
5+11	+38
6+12	+44

The total of these degrees is not 180, but 142.

This does not appear to mean anything much in terms of pathology, except that it is interesting. The thing is that we do not want to use things that forward the phase too much in those who already have a disease state. So what is going on? An NES experiment showed that once we add the Heart Imprinter, the phase can change from positive to negative. This is extraordinary!

If you were still wondering why the immune system in the blood sometimes just fails to work for no apparent reason, look no further! If the immune cells are apparently normal but don't function, you have blood field phase shift.

To correct the phase of the blood field you will need;

Heart Imprinter

Integrator 1

Integrator 10

This mixture (yes mix them in the same glass of water!) will have a phase shift to the left, or anticlockwise, of 65 degrees, something you might notice.

So if you EVER use the morphogenetic correctors, you MUST also use the above formula. This will change the phase from positive to negative!

The heart does many important things, and the ancient Chinese masters called it the Great Ruler and Controller, as well as the Ambassador of Happiness and Joy. That was its function in the Emperor's court you see. The job of the heart was to make a merry, musical sound, like an organ. Remember that all of the "genetic" meridians, called the divergent meridians, have a clear link to the heart organ in all TCM sources.

This leads us to our next series of observations...

- Emotional oscillators as a source of phase error in the forward direction.

The emotions we have experienced are supposed to come and go like a flash of lightning in the dark sky, as the Zen master says. That is, they happen and go; we do not hang onto them forever. They leave, as the Zen master said next, no trace.

This does not sound like Woody Allen on his third marriage and sixth psychiatrist! (See his great movie “ Deconstructing Harry” for great insight into this!)

Many people have entertained the idea that the brain can set up permanent reminders of unpleasant events that play like a tape loop for years and year, and can affect health after a time. This would not only explain nagging, but also the obsessions, dreams and odd behavioural loops that so fascinate us.

Why might this be of interest? After all, the first inkling of the development of a cancer is the failure of the nerve to the organ.

Shock of various types – surgical, sexual, traumatic, and psychological, and of course chemical—can all leave a tape loop somewhere.

Dr.R.G Hamer explored this when his son was shot, recovered from this wound, but subsequently developed a fatal cancer. Hamer traced the information pathway of shock, from the origins in the sensory systems, to the relays within the brain to the deeper parts of the cerebellum—the Medulla—and from there to the old brain, the spine, the spinal nerves, the splanchnic nerves, the organs, from there to the skin, where of course the homeopaths had always seen evidence of a disease, which ends up as a discharge. This is a gross oversimplification of Hamer’s work, but you get the idea that there is a bioenergetic pathway for shock which makes a loop in the physical sense in that it has known pathways.

I have tested these pathways by “matching” techniques, and they do match certainly. This remarkable doctor actually studied some 15,000 scans of patients’ brains to find concentric rings or interference patterns in different parts of the brain! There are many pictures of these in his book. The response of radiologists was to try to prevent him from getting access to the scanners or to declare the concentric rings to be artifacts.

If you have read Wolff on the electron you will have a pretty good idea about what the concentric rings might be, and we would expect to find one or even two of them with each disease state. So this indeed is the New Medicine! Hamer’s New Medicine is also heavily indebted to embryology in its more complex parts. Enough!

Hamer agrees that he is describing not just the pathology of cancer, but the pathology of all diseases, the cure of which has eluded the medical profession for some thousands of years. He states that he can predict where a cancer will appear from looking at a brain scan! If this is correct, and I cannot verify it, then the Nerve Field is what tells us where the cancer must appear! If so, we might find this useful:

Heart Imprinter

Nerve Driver

Integrators 1 and 5

But Dr Hamer is evidently unaware of the Wolff ideas, current since 1990. Why does Wolff propose TWO spherical parts of the electron, and not one? The electron has to be able to generate one of its characteristics—frequency. To do so we have to have an oscillator, and the presence of the two spheres in space is enough to generate these frequencies, of which there have to be at least four, for any one single electron.

These oscillators are of huge importance since they are the cause of a phase shift in the central nervous system. Even in audio, or sound electronics, it is well known that phase shift makes a high frequency sound very unpleasant to the ear.... Just as the emotional oscillator makes a very irritating “sound” that upsets its targeted organ tissue...and on the outside first, where the nerve enters the organ.

If you decide to try to calm the activity of these Hamer Loops, then there is a need to calm the central nervous system surely.

Heart Imprinter

ES1 Immunity

ES 8 Chill

- Balancing phase in different ways.

So far in the body field, as far as phase is concerned, we have found the following:

1. neutral phase related to frequency in the Integrator system, going from very low sounds to microwave frequencies, with the exception of Integrator 6.
2. advanced phase in certain Integrators when there is a disease state
3. evidence of retardation of the phase in the Drivers
4. evidence of retardation of the phase in Energetic Terrains
5. evidence of advancing phase in the case of the genomorphic fields.
6. evidence that the Heart Imprinter can reverse the phase

The system is evidently complex and interactive!

- Emotional oscillators and their effects on phase

A complex experiment has been done where we made up a replica of an emotion, with a replica of the body pathway taken as a rule by that information set. They were then linked serially with their home Integrator, and then last of all the phase was read off to see how much that emotion was in terms of phase value. Emotional phase values get higher as we go up the scale of the Integrators. All of these retard the phase because they are emotional correctors. If the emotion is withheld, then it may have the opposite effect!

Emotional oscillator linked to Integrator	Retardation of phase in degrees
1.	-19
2.	-19
3.	-19
4.	-21
5.	-22
6.	-25
7.	-38
8.	-55
9.	-63
10.	-76
11.	-87
12.	-99

Expression of emotions is so good for you! It will retard the body field phase by quite a lot but it depends on the emotion—they do not all have the same value. Phase errors increase markedly with frequency. The Integrators 7 to 12 indeed seem to be a lot more important than the others.

These Emotional Oscillators are not available as Infoceuticals from NES because all of these emotions can be treated as mentioned above by a simple formula. They relate only to phase shift in the nervous system field of course.

- Micro and Macro phase errors.

The motive force that sends out the out-wave from each electron in the body is likely to be the same motive force that dynamizes the system of the Integrators. This is a system where the phase error occurs between the in-wave and the out-wave, and it is the micro structure of error in the body.

The macro structure can also go wrong so far as phase is concerned, and this is of course the full body wave, with its three components, which get jumbled up, jammed, and locked when there is a phase error in one or more of the fields.

The Infoceuticals, so far as they are designed now, are for use in correcting the errors in the out-wave, which is the exploratory wave.

- Macro-phase errors and aggregation.

Here we have a huge system consisting of, I repeat again, three axes of fields, a dependence on cavities for energy supply of one sort, with a dependence on the heart for low frequency sounds (which themselves might determine phase), together with the system of channels through the connective tissues of the organs and mesoderm generally.

Nature has to be able to make this complex entity work as a single unit somehow, so that every part knows what every other part is doing. Nature uses very simple descriptors to replace complex ones. So the larger the organ structure, the smaller the description needed. The information needed is therefore possibly inverse to what we might expect. This process of self-simplification, (something that governments everywhere could learn from) is called “aggregation.” So imagine what might happen to this self-simplification system if the body field is advanced in phase in one part and retarded in phase in another. Of course I am talking about the whole body field making an aggregated phase shift, meaning that it must surely start to break up. This may be how disease starts and why it is so devilishly hard to correct.

Here we have one more comment, also related to the Hamer theory of pathology. He said there was always a dual error, and therefore two sets of symptoms with any disease, one as it came and another as it went. Perhaps we are looking at two types of error—forward and backward phase errors. Both can cause disease of course.

- Things that alter the phase of the body field.

Over the years, from 1983 to the present, I have collected samples of things to test, and as I lived in the heart of agricultural country in Australia I was able to collect samples of some pretty dreadful chemicals from farm sheds, given by farmers who wanted to help the cause.

Of course we only want to look at chemicals that cause permanent damage, and these are the ones that will somehow affect the field created by the DNA when the heart energy goes past it.

I do not agree with the CSIRO scientist who declared on radio in Australia that everything is a carcinogen. Cancer may be caused by phase shift of the field, and somehow some chemicals may contribute, but there is no way of establishing a firm cause and effect link because some people don't react in the same way as others. Here we have the effect of their hearts! If we are looking at what can advance the phase of the whole body field, we need look no further than this list of environmental toxins from the NES test.

Butanol	+4 degrees
Dichlorvos	+9 degrees
Chlorpyrifos	+16
Acrylamide	+16
Carpet glues	+33
Dioxane	+43
Asbestos	+47
Carbonyl	+59
Dioxins	+64
PCP's	+75
Tetraethyl tin	+88
Allethrin	+94
Fungicides	+124
PCNB	+222
Heptane	+442
H-toluene	+545
N-toluene	+622
Xylenes	+724
NiCrBe	+845

Of course this is a cause of some horror, if you are trying to save someone from intoxication leading to cancer, but it only appears to happen when there is a whole body-field phase error.

There is another very surprising thing: almost all foods and vitamins are phase neutral and are of little use if you are trying to alter phase. The only things that appear to have a weak phase effect are;

CoEnzyme Q10 -4 degrees
Alpha lipoic acid -2 degrees.

So all the foods supposed to be goodies, like broccoli, beetroot and figs, and so on do not show as being phase negative.

- Phase effects of some of the Energetic Stars.

ES-1 (Immunity) -2 degrees

ES-3 (Nerve) -10

ES-8 (Chill) -7

ES-14 (Detox) -1

ES-15 (Heavy metals) -2

You can make up your own mind about what is the key thing to treat with cancer, as everyone is slightly different. There is no formula for the most troublesome disease of all time! There are combinations likely to occur in the NES test, and these can be of use in reducing advanced phase.

Combinations of Stars for retardation of phase

ES3+ES14 -16 degrees

ES8+ ES15 -13 degrees

The most effective phase retarders yet found:

1. ET1+ ET2+ ET3 -45 degrees

2. Heart Imprinter +
Integrators 1+10 -65 degrees

3. Heart Imprinter +
Integrators 1, 10, 2, 8 -75 degrees

4. Heart Imprinter +
Nerve Driver, Integrators
1+5 (nervous system) -52 degrees.

- Suggested order of treatment in all types of pathology

Given half a chance, the body will make progress in healing itself. And it is necessary to stick to what the body wants, not so much what you want. *The order of doing things is very important.* But you can deviate from this rule in an emergency, of course.

IMMUNITY first of all, and this includes the use of ET1+2+3 together as well as the use of Energetic Star 1 and its associated links.

NERVOUS SYSTEM is next, and this includes all formulas with the nerve star of Energetic Star 3, as well as Nerve Driver, of course.

EMOTIONS are next, and this includes ESR and all formulae containing Chill, or Energetic Star 8.

DETOX is last, as it will already have happened as a result of the first three items. There are two types of detox, as you will have noted, cellular and one specifically for heavy metals.

You will already have noticed how important Heart Imprinter is in all stages of this phase correction process.

- Do the major phase shift combos do anything clinically?

Theory is one thing and practice is yet another. So we have to report that early trials of the technique of negatively shifting phase, which is what most people need, has resulted in rapid changes to the situations of several people. Copious quantities of smelly urine, severe headaches, and rapid change of symptoms have been reported, and the early tests of the combos resulted in my case in moderate levels of discomfort in the bladder and prostate, for a few hours.

The phase shift approach seems to be able to solve chronic infection problems, when the blood phase is wrong due to a huge phase shift. This has been tested in a very difficult case where antibiotics had twice failed to affect a chronic infection.

- A mental picture of the full body wave.

Imagine, if you will, a standing scalar wave, with its concentric rings, like little ripples in space. This is for one electron, but in the case of a full body standing wave of millions of aggregated waves it is hard to imagine what it must look like. It is suggested that there will be concentric rings coming from a focus in the heart, the kidneys, the brain—and, yes, you may be forgiven for thinking it may actually look like the one the Hindu seers talk about, with a series of concentric rings coming from points along the midline, or the Chakras as they are called. I managed to quiz a guru once in Australia about these Chakras, and you are allowed only one question. My question to this wonderful man, whose body field was so strong that he set off alarm bells at airports when he walked through the metal detector, was , What shape are the chakras? Spherical, he said.

When this series of chakras, or big balls with a real material centre, are stretched out, the in-wave and the out-wave cannot meet in the right place, according to the Wolff approach to the structure of matter. Wolff describes only the micro-picture of the molecular level. We can go further than that. In the macro-picture of the full body wave, whole areas of physiology breakdown and cannot happen in certain parts of the body, while, for survival, they will continue to happen in other parts of the body.

- Pathology is not due to one thing.

Cancer, arthritis and any other chronic disease without apparent cause or cure is, according to my theory, really an outcome of many things. These many things are all things that will assist in the elongation of the standing waves that make up our body field.

I have already mentioned them in this talk, but I will say them all again, for reference.

Stress, or failure to process data in the brain

Unexpressed emotion, due to repression

Shock, memory of shock, that is repeating

Intoxication of the central nervous system

Damage to DNA causing forward phase shift, caused by viruses, etc

Intoxication at a cellular level, environmentally related

Damage to the major body field centres called chakras

Heavy metal intoxication of the bone marrows

Heavy metal intoxication of the central nervous system

Geopathic stress at the cellular level

Damage to the Heart Imprinter, or Heart Chakra

- Self-propelled remission is possible in this model.

There is not much use on advancing models for pathology which do not allow for client-oriented remissions and cures, since these are a very well known feature of healing and medicine. In this model it is not only possible, it is mandatory.

If the client really wants to get better, then they make sure no stone is unturned until they do. The doctor is merely the intermediary for this process.
