

## Drivers Lecture Part 2

### The Characteristics of the Quantum Hologram

First of all we can say that it is the product of a process I call Aggregation. All of the millions of tiny bits of organization of the body all contribute, and these bits are able to join together into an ever-larger structure. It begins with the individual atoms of the body and ends with a structure of infinite complexity... and I use the word infinite correctly, because it can go on adding bits forever.

The Hologram appears to be able to store unlimited amounts of information, which can be transferred from one part of the hologram to another of course, this being the reason for its existence.

The storage is in terms of phase relationships, that is like how a jigsaw fits together. Phase error between two or more waves can always be expressed as an angle in space, but of course we are dealing with three dimensions, so we get sets of vectors. Added to this is the ordinality of the system, which is extremely important, and, if ignored, causes errors in information transfer.

All of this has been said before and I am merely recapitulating. But there is another most curious characteristic, and that is the offering of preferential pathways through space. This depends basically on the impedance or reactance of space.

When we get a match, there is a change, and this can be measured, as it has been for 45 years or more, as an electrical dermal measurement on the human skin. Now that doubt has been cast on its true electrical nature, we have to say what its nature may be, if it is not electrical entirely.

Looking at the Quantum world as a substrate of the world where normal physics applies does not mean that one is real and another is virtual, so having less of a reality than the other world. A great deal is spoken about real and virtual that is nonsense.

The world suggested by Milo Wolff means that the Quantum world is just as real as the normal world. There is no need to construct any "virtual" anything, and this will be a huge relief to all those who can't cope with one world let alone two!

So taking Milo Wolff's idea of the electron as one of the three "real" particles, and considering the rest as "interference patterns" or the "appearances" suggested long ago, then we do get to some very interesting territory indeed. This means that the photon is really an appearance caused by the interference patterns set up by several electrons, possibly three.

Photons do not take part in the Quantum effects so evident in the world of the electron. In fact a number of reputable scientists have said that we don't need them at all! But experiments that show that one photon seems to "know" what another is doing is explained by the fact that interference patterns can match,

When we measure a photon we are measuring the interference patterns set up by several electrons. And here their frequencies are of great importance. Wolff's theory means that just one electron can set up interference patterns, since it has two "centres" of high density in space that can separate, or converge,

The key point I wish to make about this terribly technical area, for those who are not technical at all, is to say that it is possible to use Milo Wolff's ideas about the possible structure of the electron as a very nice explanation for something that has been observed by our precious dermal testers in acupuncture for 45 years.

It all comes down to reactance. This is the resistance shown by a medium to the passage of an alternating current at a certain frequency, and the effect increases as frequency does.

There is capacitive reactance as well as inductive reactance and both of them will be found in our system the HBF. However the point is that there is always the idea that there will be positive values... what we might call resistance to the passage of waves through space. But it is clear that there is also a negative value possible for reactance. This has already been studied in the low temperature dynamics of certain metals where we get something called superconductivity. Every one wants to apply this to the human body and to biology and I am sorry it will not work as we are not a minus 375 degrees Kelvin organism.

We don't really get superconductivity in the body, but I am sure you will agree that we can get changes in conductivity that are not explained, and the effects seen in the dermal measurement systems available to us now are certainly based on conductivity changes.

Milo Wolff see the electron and the other two "particles" that are set up as waves, as being nonlinear oscillators. This is a highly technical term. But it means that the electron can set up different patterns in space, something we are certain it can do.

In 1990, so long ago now, Milo Wolff wrote "Exploring the physics of the Known Universe" (Technotran Press, California) putting him beside Einstein, and slightly to the front. I am using the model for the atom described by him, after a lifetime of physics! You will find there a description of the electron as a non linear oscillator.

The amazing thing is that in the science for nonlinear oscillators we do get a phenomenon called negative reactance! To find out more, just Google "non linear oscillating systems".

This would account for the "matching" we find as the basis for all the observations that I have made over 30 years between various things in biology, represented merely by their

energetic holograms! When the match occurs – and here it the punch line- the resistance of the body field as a whole will temporarily change! This is measured as a change in conductivity by the dermal instrument -which ever type it is. For those wishing to research this, the three volume set of texts has been written by my colleague, Dr Julian Kenyon, ‘ Modern Techniques of Acupuncture’ ,published by Thorsons in 1985. Volume three is the one of interest here.

Commentary on Additional Drivers.

### Stomach Driver

This is one of the most used of all the Drivers and will affect the lining of the stomach, as well as the lining of the entire gastro intestinal tract. This includes the throat and the mouth. This is the one to use for heavy metal intoxication. The most likely one is Cadmium of course but there could be Lead in the large bowel.

The use of the Drive nearly always causes some initial detoxification reactions. He course of the Stomach Meridian should also be notes as this one has big effects on the long bones of the legs, and the bone marrows.

The pathway inside the brain in the frontal lobes noted many centuries ago by the Chinese physicians should also be remembered, and there will certainly be some mental reactions to the use of Stomach Driver. This one is the one to use initially for Aldzheimer’s Disease.

If you wish to affect the tissues inside the cranium you should think always of;

Stomach Driver

Kidney Driver

Heart Driver

For the cortex you should always think of Integrator 7.

For the Corpus Callosum you should think of Integrator 12.

For the Midbrain you always think of Heart Driver and Integrator 4

If the Stomach Driver simply won’t come right you may need to treat the Kidney Driver, or the Pancreas Driver.

## Muscle Driver;

Heavy metals have an affinity for the stomach lining, and Cadmium in particular should be checked here. The Chinese always say that the Stomach Meridian energy would affect the muscles. Certainly it affects them generally, not just the ones it crosses on the legs. This can make the muscles stronger in those with weakness due to arthritis.

There are a number of matches with disease descriptions here, and of course no data to support it so far. I say again that no claims can be made.

Reduced muscle tone

Arthritis of some types

Myositis and myelitis

Myofascitis

The Chinese described Muscle meridians that were supposed to go over the flesh superficially. I do not think there is much science behind this observation of the Chinese of ancient times.

## Skin Driver

This does not affect the Skin diseases so much as mucous membranes of organs. ENT. Ear Nose and Throat. This can be seen when I list the matches with tissues we have established by testing.

Acne rosacea

Catarrh

Colitis

Crohn's Disease

Allergic reactions at skin and bowel tissues

It is best not to treat skin diseases with this Driver, but Heart should be treated initially at least.

Inflammation of mucous membranes of joints, and organs may show up as a reading of this Driver by the NES test.

## Liver Driver

A very complex one, and contains links with liver cells, centrosomes, pancreatic alpha cells, Beta cells, several types of lymph cells, and the vagus nerve. Alvoli and Centricenar cells.

There are matches with

Alcoholic poisoning

Blood clot

Liver congestion

Gout

Hyperinsulism

The lymph of the liver

One of the main functions of the liver is related to the breaking down of larger molecules that are to be excreted. But when you consider that the Meridian related to the liver goes right behind the eyes, to the tip of the cranium, you will get a better understanding of this type of treatment. Sore eyes and intoxication go together! This is the connection.

This Driver may affect the liver as well as certain functions of the pancreas, and because of this it is not necessary to use Liver Driver and Pancreas Driver at the same time. I have heard stories of Liver Driver being used for morning sickness. The liver's job is to destroy excess hormones in the blood.

Livers get damaged by drugs, of all types. The organ is supposed to regenerate every six months but this is clearly not the case so far as function goes.

Liver Driver will give more energy to the Meridian, a branch of which goes to the scrotum in the male and the ovaries in the female. I have heard stories about increased semen production. The prostate gland of course belongs to the Kidney Driver and the Integrator 5 and 6.

## Kidney Driver

This could also have been called cell nucleus driver. There is a correspondence on energy, if not in physiology. It also links with the kidney tubules, and the kidney membrane.

Matches with

Swelling of the kidney organ

Renal colic

Nephritis

Concussion ( due to a link with brain tissues, resembling the kidney tissues due to tubules).

If Kidney Driver shows up it does NOT mean there is Kidney disease because of the so far unexplored link to the brain tissues. NES is not a diagnostic machine!

In cancer cases Kidney Driver will show up because the nucleus of the cells are inflamed and chaotic.

Immunity Driver

This is tagged to combine the various blastic cells in the bone marrow that create blood cells – in particular the red blood cells and the lymphoblasts, plasmablasts and macroblasts. Mast cells are found here as well as tags. Splenic tissue is energetically related as well.

This Driver is NOT about antibodies formed for various viral diseases. It is more about the immune system that engulfs foreign material with macrophages. It is more about lymph cells.

Cell Driver and Immunity Driver should always be used together... a good rule.

Because of this limitation, it is quite in order to use Immunity Driver together with Thymus Driver, if there is a general collapse of immunity.

Please bear in mind the length of time it takes to manufacture new blood cells, so there will be a delayed effect with this Infoceutical.

Pancreas Driver

This is related physiologically to the Liver Driver of course, but the Pancreas is a dual organ and has of course several functions.

We find then that we need to tag the Islets of Langerhans, alpha and beta cells, vagus nerve as well as lymph, the head and tail of the organ as well.

It also contains Integrators 4 and 12 to make it one of the most complex of all the Drivers.

There are many matches, but effects on diseases are unknown at this time.

Indigestion

Pancreatitis

No appetite

Hypoglycemia

This Driver , not surprisingly, does NOT appear to affect Diabetes Mellitus. It is suggested that Diabetes is a complex phase error disease More of this later, when a more clear pattern is known.

#### Thymus Driver

This is one was added some time after the rest in response to the need for correction of odd immune system errors.

It uses tags for the lobes of the organ, as well as links to Integrators for the Lungs and Pancreas, and Spleen.

This maybe of use for chronic viral diseases , where the Immunity Driver does nothing.

Over the years of testing we have noted links with asthma and allergies to this Driver.

This Driver, when it appears may indicate the failure of the antibody system of the immune systems. This is responsible for long term viral immunity. Hence it may show up in a test when there is a low level chronic viral disease, like CFS. For attempts at antibody formation we can use the Energetic Terrains of course AFTER the thymus us corrected. Remember how long it may take for the antibody to form. Thymus Driver is going to have long term effects.

#### Bone Driver

This is merely a combination of three Drivers together – Liver Pancreas and Kidney.

The inspiration for this comes purely from Chinese Medicine , because these three energy channels cross at a point on the lower legs that is a very effective treatment point for encouraging bone knitting and other problems with calcium metabolism. They have been combined so have quite a different effect from those noted for the Drivers on their own.

This is why we keep saying take them ten minutes apart ... combining Infoceuticals may alter their effects.

It turned out that the inspiration was quite correct and that the use of this driver will cause quite a reaction in some people where calcium metabolism is not right and also where there is need for a detoxification of bone tissue. So there is a reason here not to overdose on Bone Driver when there are likely to be detox reactions. Of course the Liver and Kidneys have a physiological role in breaking down chemical molecules and sending the unwanted ones out of the body.

Think too of calcifications of organs, such as the heart, brain and kidneys. Think of osteoporosis. Some remarkable stories have been heard about the effects of this Driver on the Heart.

#### New Research on the Drivers

If the Drivers are the motor, then the Integrators are the fuel injection system. So we have to get the Drivers right before we do much else.

Sometimes Drivers will not come right. So what do you do after a number of treatment sessions have failed?

Your failure can be due to the entire body field being distorted from years of illness.

Cell dysplasia has been registered in some of our experiments at 180 degree phase error reading. Cell dysplasia means arthritis. We have found people with the early stages of acute arthritis at 181 degrees phase error.

Now here it has to be said. You will never get very far treating some types of arthritis as an auto immune disease . If its not respond to auto immune correction then you have to go for phase correction.

Very simple ways of correcting phase involve using

Heart Imprinter

Cell Driver

Circulation Driver

These are used together at the same dosing session.

Seeing a huge proportion of the population has this disease, I think its worth trying to shift phase, particularly when these come up in the NES test.

Low dosage and caution are recommended, because there can be strong emotional effects as well as other changes, pains in the heart, flare ups of old diseases, meaning fevers , and so on. And headaches!
